IBM Power Systems

- ✓ Modernize your infrastructure
- ✓ Enhance security
- ✓ Lower your operating costs
- ✓ Increase scalability

IBM Power Systems Solves the Following Challenges:

My legacy systems are old, slow, and failing

My team lacks the skills necessary to build a scalable technology footprint

I can't keep up with the pace of change within my industry

I don't have the technology thought leaders to support my business strategy

Can your Business Survive the Down Time?

What is your RPO & RTO?

Recovery point objective (RPO) is the maximum acceptable amount of data loss after an unplanned data-loss incident, expressed as an amount of time.

Recovery time objective (RTO) is the maximum tolerable length of time that a computer, system, network or application can be down after a failure or disaster occurs.

IBM Power Systems

Meridian offers four IBM Power Cloud offerings based on your unique needs.

1. Disaster Recovery as a Service
2. Infrastructure as a Service
3. Backup as a Service
4. High Availability

IBM Power Systems – Disaster Recovery as a Service

Disaster Recovery as a Service is a cost-effective cloud-based recovery service which protects against unexpected system interruptions and recovers mission critical applications, services, and data – in 24 or 48 hours guaranteed.

Key Benefits:

- Data vaults located in best-of-class and geographically diverse data centers
- US-based expert monitoring and management 24/7
- Rapid remote access to recover critical data and operations
- Expert support minimizes economic impact of interruption
- Secure solutions aid compliance with data protection regulations
- Smooth restoration of service ensures business continuity

IBM Power Systems – Infrastructure as a Service

Infrastructure as a Service is private cloud infrastructure built on best-of-breed technology in world-class data centers that run your mission critical applications and services – at one affordable price.

Key Benefits:

- Data vaults located in best-of-class and geographically diverse data centers
- US-based expert monitoring and management 24/7
- Secure, fast, and redundant connectivity
- Enterprise-level data backup
- Custom configurations

IBM Power Systems – Backup as a Service

Backup as a Service is a resilient cloud-based backup service that securely backs up critical data to ensure data protection – and provides peace of mind.

Key Benefits:

- Data vaults located in best-of-class and geographically diverse data centers

- US-based expert monitoring and management 24/7

- Secure and redundant data backups

- Fast and efficient de-duped daily transfers lighten network loads

- Enterprise-level data backup and retention schedules

IBM Power Systems – High Availability as a Service

High Availability as a Service uses the latest virtualization technologies to improve security, reliability, and scalability – at one affordable price.

Key Benefits:

- Data vaults located in best-of-class and geographically diverse data centers
- US-based expert monitoring and management 24/7
- Secure and redundant data backups
- Custom configurations and flexible contract terms
- Compliance with industry regulations to meet RTO and RPO requirements

Backup and Recovery

- ✓ Ensure your data is protected
- ✓ Combine the best of on-premise software and offsite cloud services
- ✓ Gain maximum uptime
- ✓ Reduce costs
- ✓ Achieve scalability to grow with your business

Backup and Recovery Solves the Following Challenges:

My legacy systems are subject to downtime

My team is seen as a cost center

My environment is vulnerable to attack
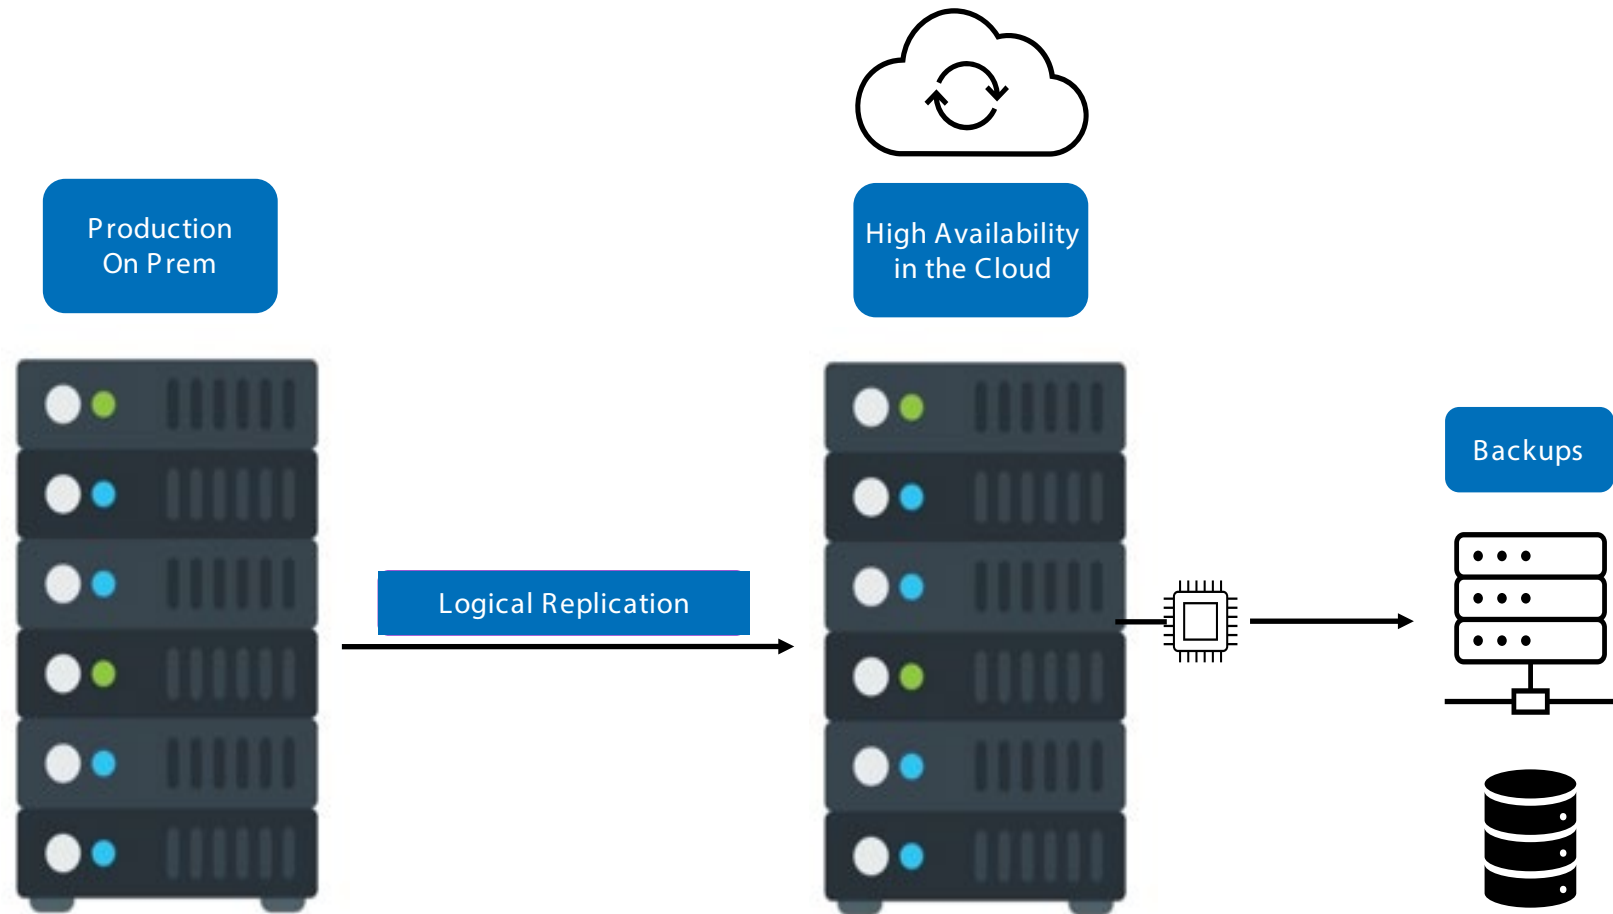

My business is exposed to risk

I can't keep up with the pace of change within my industry

I worry I am losing revenue to my competition

Backup & Recovery in the Cloud with Logical Replication

Production On Prem

High Availability in the Cloud

Logical Replication
